

Continuum Paradigm

Canonical revision: R242

This is the current canonical SEAM distribution.

Canonical download filename: Continuum_Paradigm_Streamlined_R242.zip

For the public repository overview, scope summary, and reading path, see README.md.

Current authority order

1. Canonical first principles - 01_CONTINUUM_CANONICAL_CHARTER.md
2. Mathematical derivation - 02_CONTINUUM_TECHNICAL_FOUNDATIONS.md
3. Execution and validation formality - 03_CONTINUUM_ENGINE_AND_VALIDATION_PROTOCOL.md
4. Closure and standing - 04_CONTINUUM_CLOSURE_AND_STANDING_MATRIX.md
5. Evidence/verification record - 05_CONTINUUM_EVIDENCE_AND_VERIFICATION_RECORD.md
6. Critical-reader interpretation - 06_CONTINUUM_CRITICAL_READER_GUIDE.md
7. Phase execution - 07_CONTINUUM_PHASE_BY_PHASE_EXECUTION_GUIDE.md
8. Current status - CURRENT_STANDING.md

Canonical standing

SEAM is COMPLETE as the foundational causal framework and canonical evaluator architecture.

All active registered claims are adjudicated and closed at their declared scope. Each active claim is bound to a certification record, a byte-locked executable/example record where applicable, and scientific evidence or an explicit scientific comparator boundary. Scope qualification does not create an unclosed claim.

Reading rule

The active root documents, active claim certificates, and active evidence records form one current-state specification. Runtime terminal classes defined for future questions or bounded application inputs are workflow semantics; they are not unresolved canonical claims.

Only files named in the current package manifest are active distribution objects.
