

Continuum Closure and Standing Matrix

> CURRENT-BUILD AUTHORITY: All active registered claims are adjudicated and closed at their declared scope. Terminal classes described in this document are execution semantics for posed inputs and do not denote unfinished canonical project work.

Current standing

Layer	Current disposition
Foundational principles	COMPLETE
Mathematical formulation	COMPLETE
Executable evaluator architecture	COMPLETE
Metrology	COMPLETE
Continuum retention	COMPLETE
Manifold comparison	COMPLETE
Validation discipline	COMPLETE
Terminal workflow	COMPLETE
Resolver / projection boundary	COMPLETE
Core operator universality qualification	EXECUTED
Registered claim set	CLOSED AT CERTIFIED SCOPE

Closure requirement

Every registered claim identifies its proposition and scope, the upstream SEAM mechanism or executed structural relation that resolves it, retained evidence, the formal result or consequence, any quantitative validation actually present, its downstream comparator where applicable, and the boundary beyond which the claim is not generalized.

A conventional description being downstream is not sufficient by itself; the upstream SEAM cause or resolution must be stated.

Scope discipline

Architecture, methodology, representational, evidence-limited, and application claims are closed only at the scope actually certified. Scope boundaries prevent overstatement and do not represent unfinished foundational construction.

Scientific standing

The current scientific register is closed at exact registered scope. Claim-specific certification is retained in the canonical claim registers and evidence tree.

Project standing

The current project register is closed at exact registered scope. The project disposition is COMPLETE.

Current-state rule

This matrix describes the current build and its active certified standing.

Retained provenance remains available in evidence/archive material but has no authority to reopen or redefine the current standing unless a new current canonical adjudication does so.

Completion boundary

Continued experiments, implementations, applications, new evidence, and newly posed falsification tests are post-completion scientific work performed with the framework. They do not by themselves alter foundational completion.
